prototype 属性使您有能力向对象添加属性和方法

```
function user (age, sex) {
         this.name="张三";
         this.age=age;
         this. sex=sex;
         this. eat=function() {
         //方法体
            alert("我是user中的吃的方法")
   }
function user2() {
         this.run=function() {
            alert("我是user2中跑的方法");
}
user.prototype=new user2();
//创建对象
var us =new user (12);
us. look="看雾霾";//js中对象的使用比较灵活
```

简学堂·*写识视所*

```
alert(us.name+"<---->"+us.age+"<---->"+us.sex+"<=
===>"+us.look);
us.run();
```
